

Are Your Backups Usable?

Backup Testing and Automation with SureBackup

Agenda

Automated Testing with SureBackup

Intro

Why are you backing up your data

What problems can arise with backup data

How are you sure a backup is “good”

Where SureBackup saves the day

Why are you backing data up?

Application data are critical to businesses

**Active
Directory**

**Exchange:
Mailboxes**

**SQL:
Databases**

**Apache /
IIS servers**

**User
Network
File Shares**

**Applications solve problems and make money
for today's businesses!**

Your Boss

From the Business side...

Businesses know that application downtime loses valuable work and money.

The business should defines the importance of applications, not IT!

What's a Business Service?

Business services are provided by applications:

- Email is a service that is provided by Exchange / O365
- Application Delivery can be one or many servers that provide applications to users over the network (EG: Citrix)
- Travel Planning and Expense Reporting are business services that can be provided by Concur (SaaS)

BIA, RPO/RTO, and other TLA's

BIA: Business Impact Analysis - What is the impact to the business if a service fails?

RPO: Recovery Point Objective – How much data loss can the business incur? (minutes, hours, days)

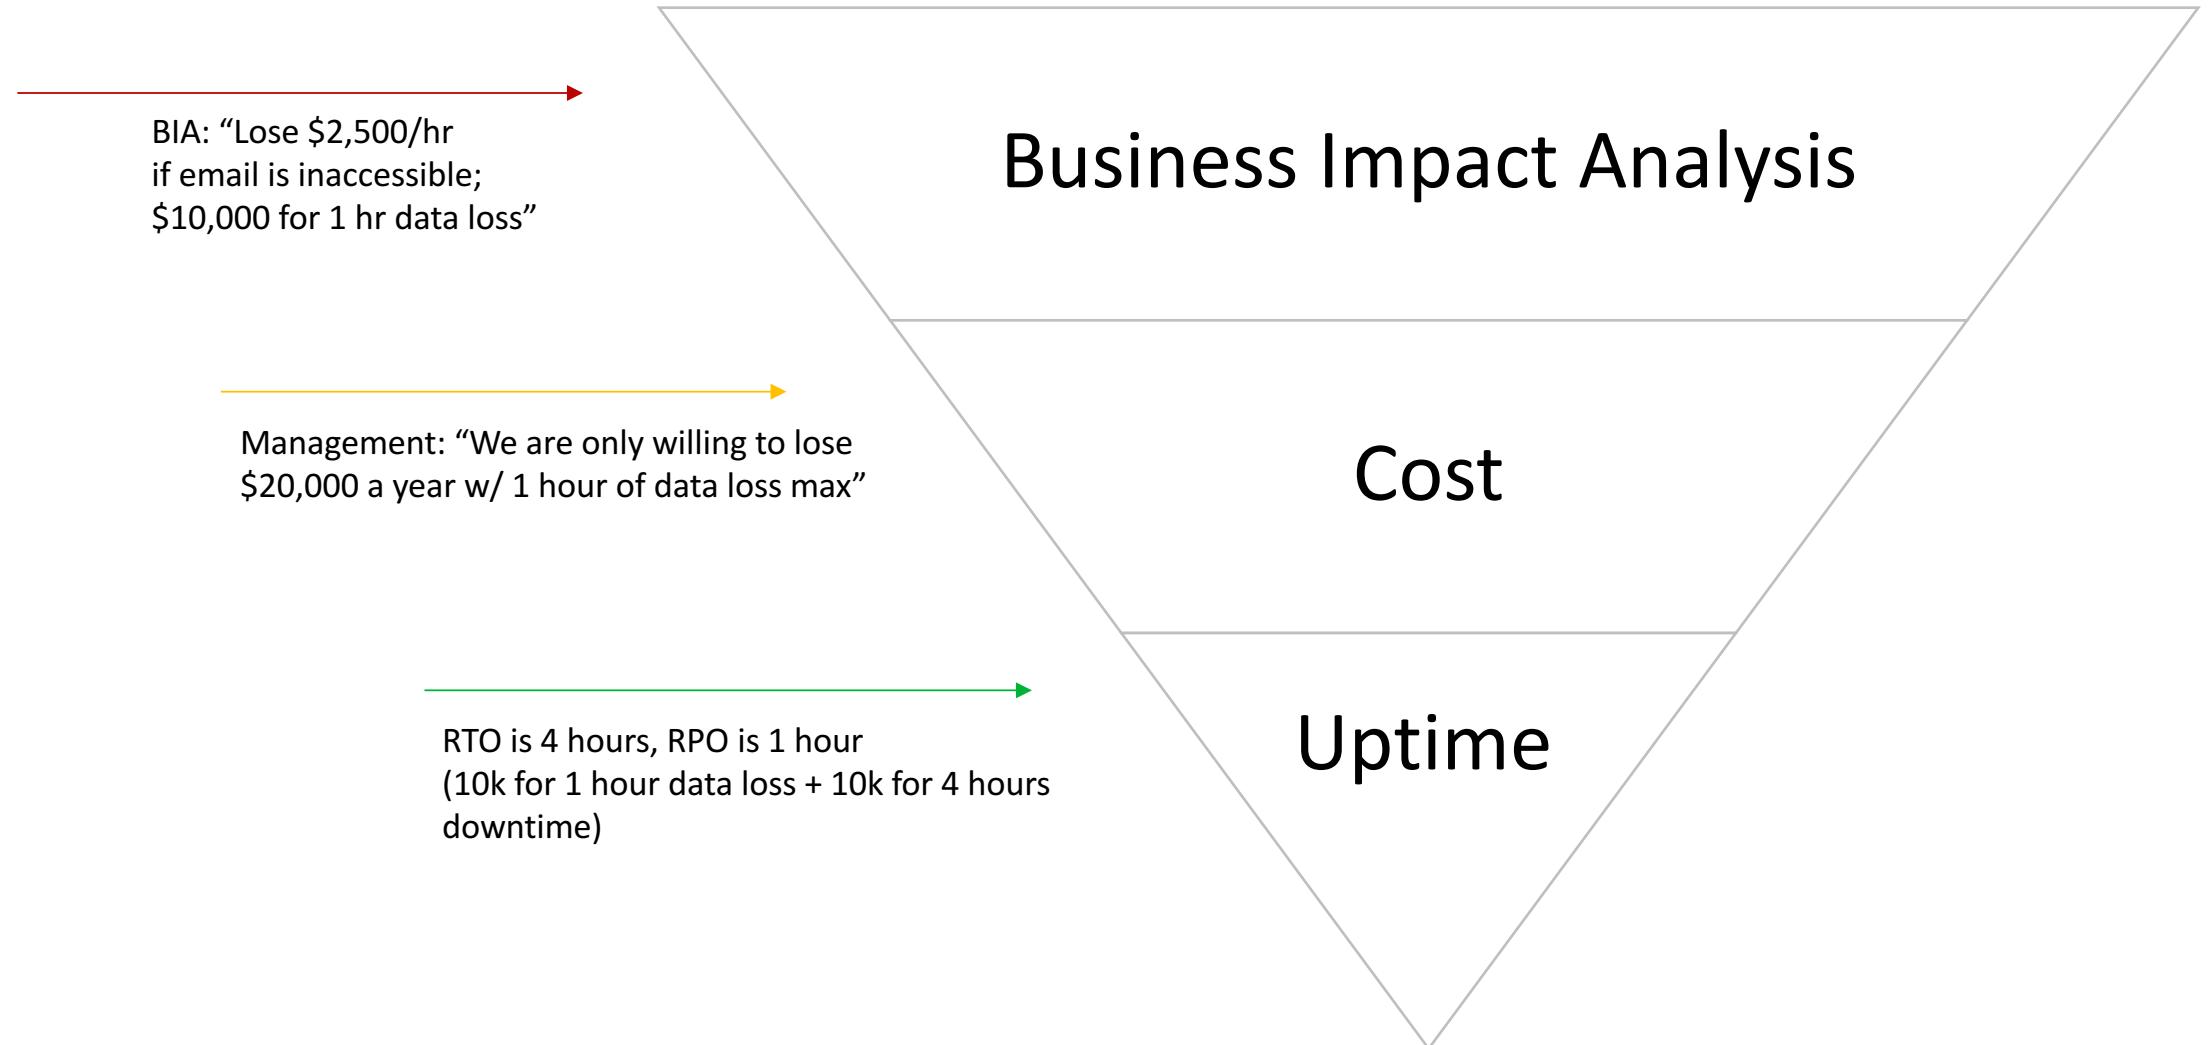

RTO: Recovery Time Objective – How long do I have to restore this data to working order?

TLA: Three Letter Acronym

RP... what?

BIA defines RPO/RTO

Put it all in perspective

- SLAs help form RPO/RTO targets, which in turn dictate the backup and recovery windows
- Knowing these timeframes helps secure business assets and moves away from “reactive” mindset
- Identifies which apps are important, which to recover first, and in what order

The background of the image is a dense, overlapping collage of US one hundred dollar bills. The bills are slightly faded and layered, creating a textured, financial backdrop. The text is centered over this background.

Backups Protect the Business

...and the business protects

our paycheck!

Emphasis on the “Recovery”

RPO determines how much data we can lose, hence how often we backup.

If I can lose 24 hours of data, is a once-daily incremental backup satisfactory to meet the business needs?

What about a once-daily full backup?

What if I can't restore that backup?

Give it to me Straight Doc...

Any break in the backup chain has the potential to lose money for your business

- Production Server outage
- Backup Server failure
- Backup media failure (Disk/Tape)
- Failed backup (timeout/intervention/etc)
- Inconsistencies between App Tiers
- Data Corruption on physical media

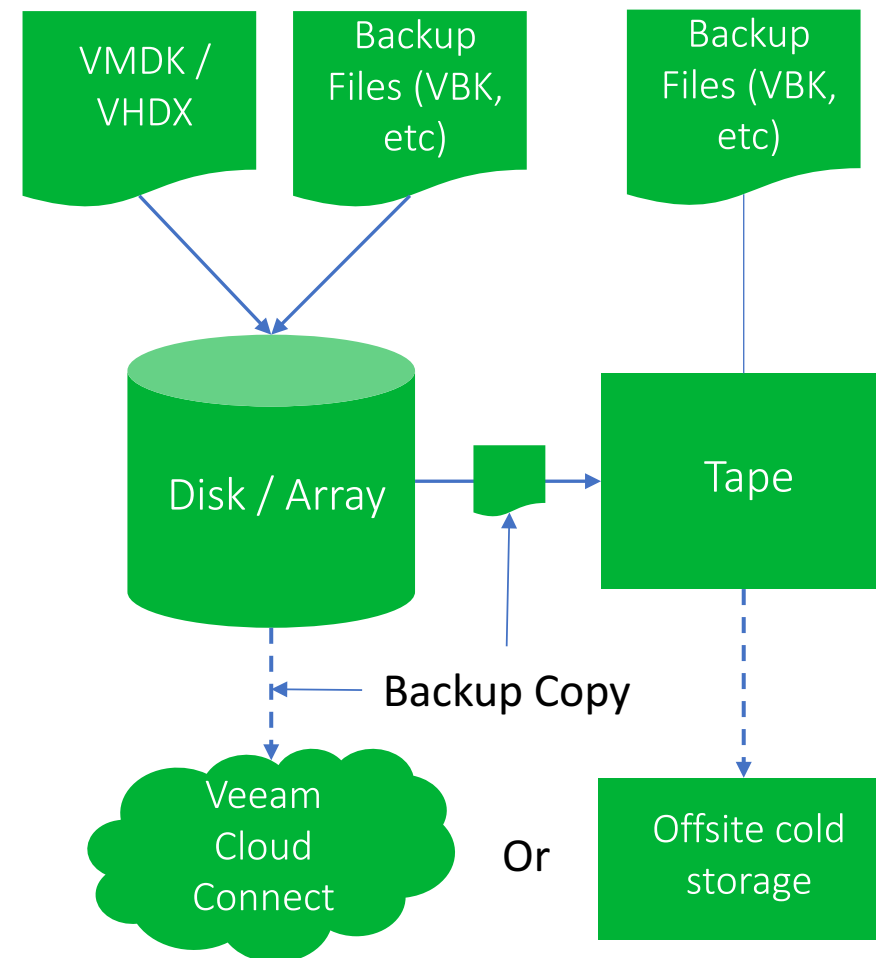

Ransomware

What do I do?!?!?

3-2-1 Rule

But how do I know...

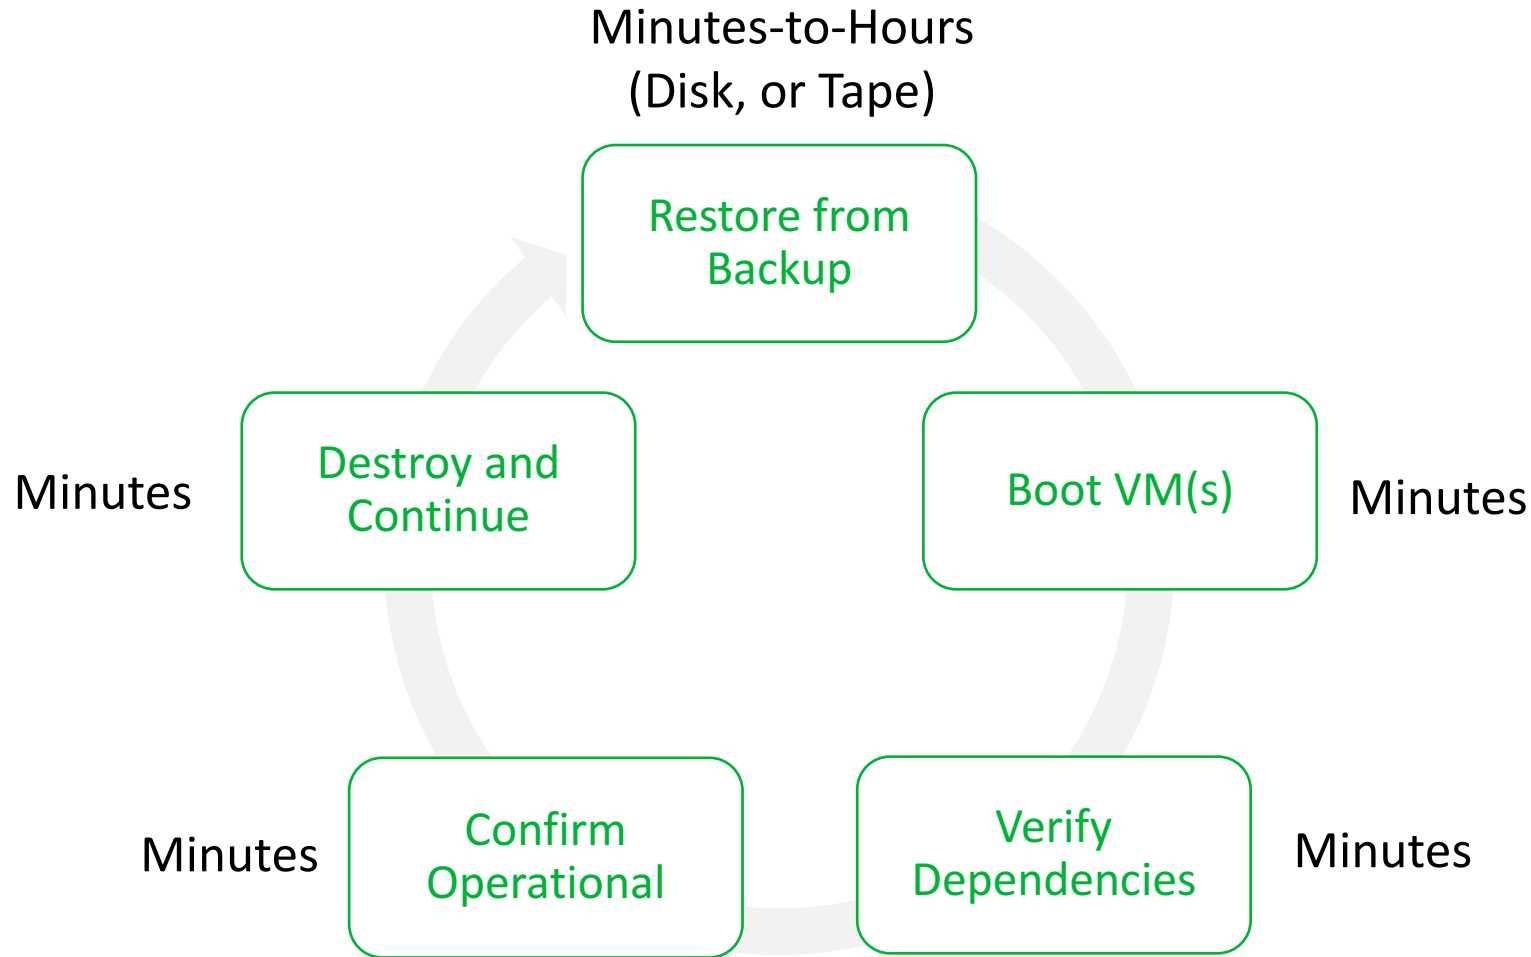

Test your Backups!

- Test your Backups
- Test your Backups
- Test your Backups

Testing Backups Takes Time

Minutes to Hours
Per-Application

If done manually,
delays **will**
happen

But I got stuff to do!

I have a bunch of backups...

What am I supposed to do, hire somebody to test all of them?!?!?!?

Let the computers do the work

Internal Use Only

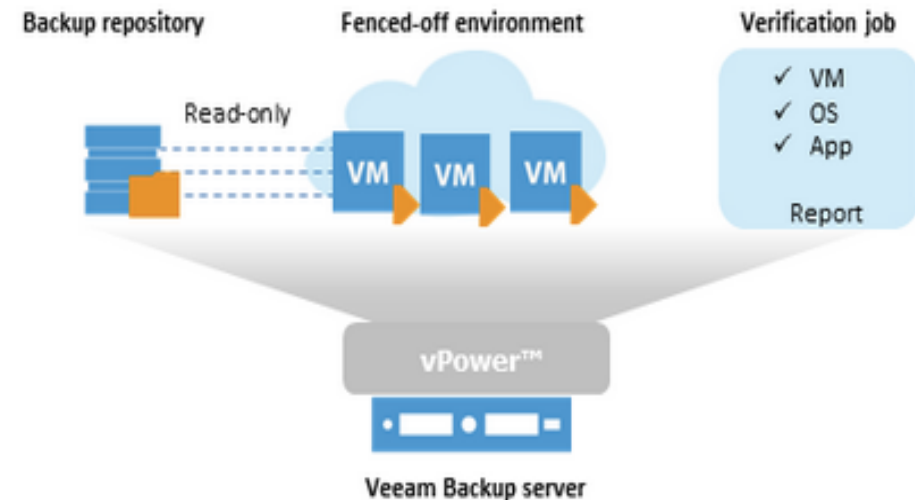

As long as they aren't Skynet...

SureBackup does the work

- Schedule backup tests in Read-Only mode
- Network Isolation to ensure safe execution
- Automated tests of VM, Operating System, Application(s) and Custom Scripts
- Works for Hyper-V and vSphere

SureBackup - what it tests

Automated Testing of:

- OS – API calls
- Heartbeat Test – VMware Tools or Hyper-V Integration Svc
- Ping and Network port probe (any network application)
- MSSQL – connect to DB and execute “USE SQL” query
- Custom scripts

Avoid False Positives!

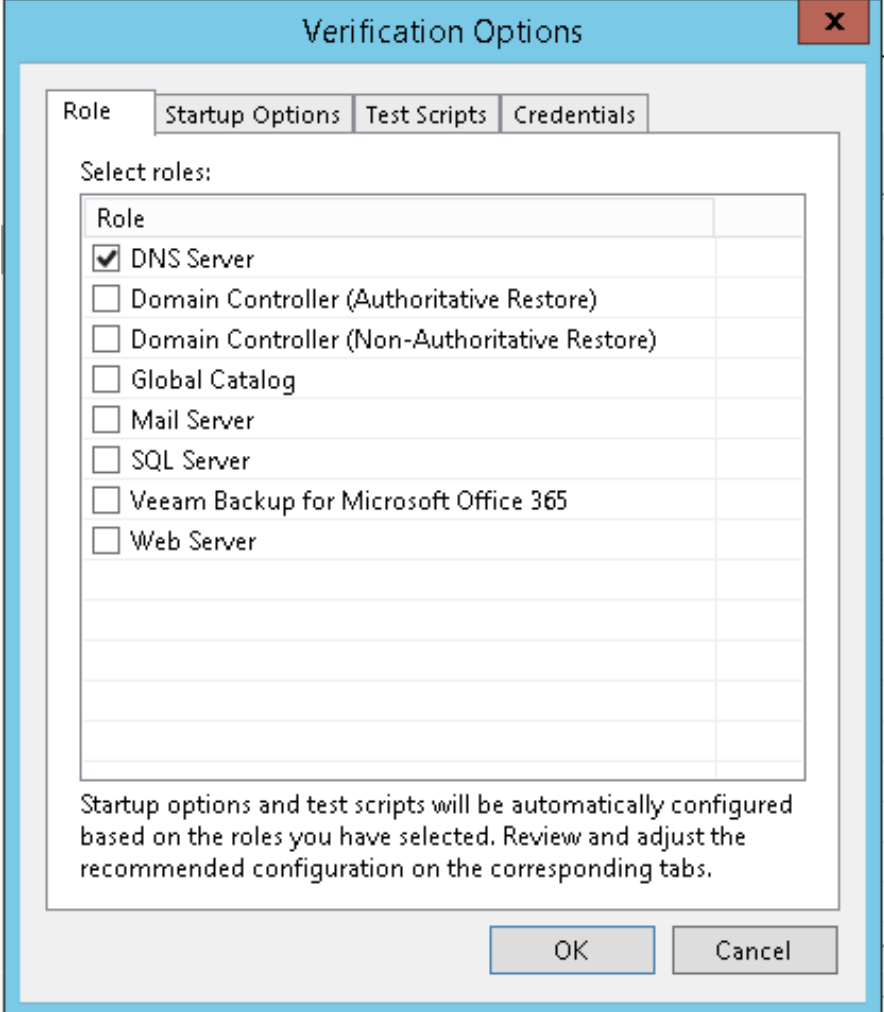

Internal Use Only

Application Groups

- Select a group of VMs to test
- Most apps require Infra Services:
 - Active Directory Domain Controller
 - DNS Server
 - Email Server
 - Web Server
- Application Groups can form the Infrastructure Services Foundation
- Dependent list / services

Verification Options

Role Startup Options Test Scripts Credentials

Select roles:

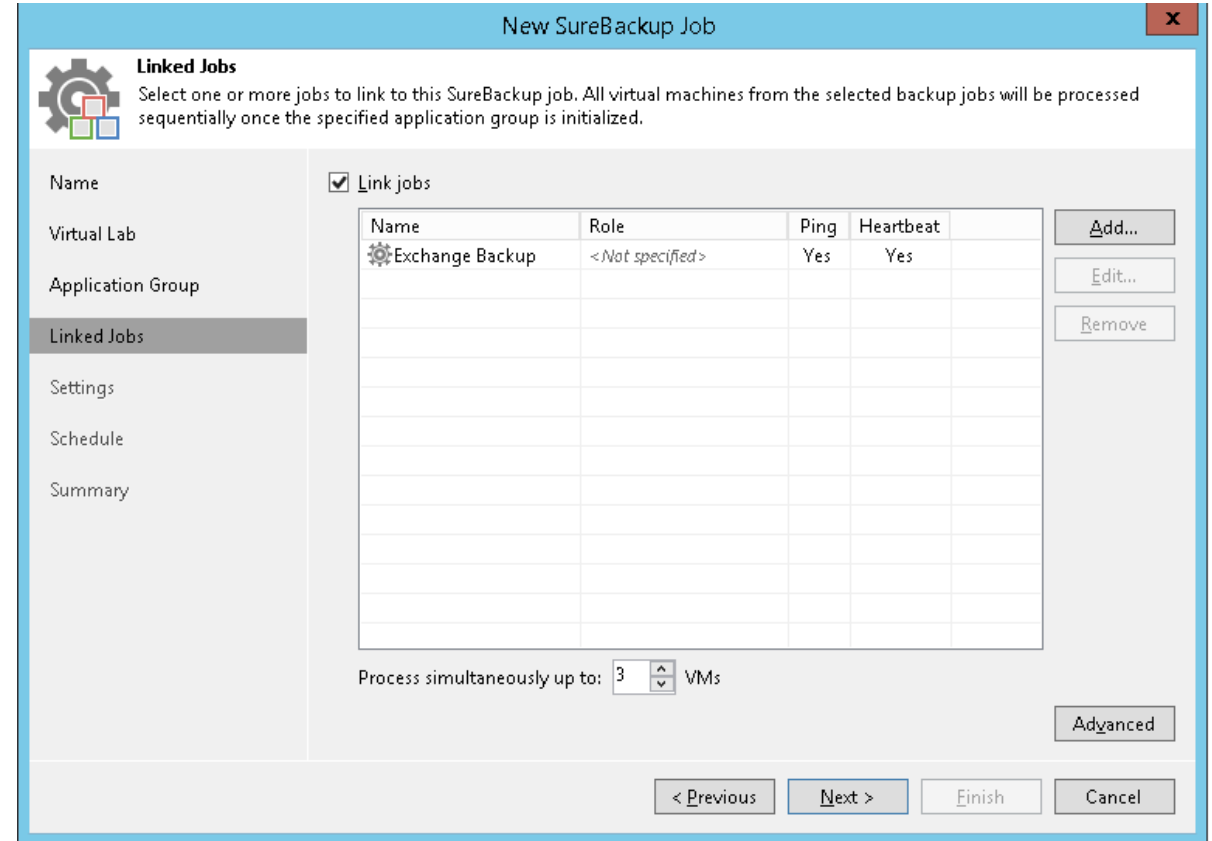

Role
<input checked="" type="checkbox"/> DNS Server
<input type="checkbox"/> Domain Controller (Authoritative Restore)
<input type="checkbox"/> Domain Controller (Non-Authoritative Restore)
<input type="checkbox"/> Global Catalog
<input type="checkbox"/> Mail Server
<input type="checkbox"/> SQL Server
<input type="checkbox"/> Veeam Backup for Microsoft Office 365
<input type="checkbox"/> Web Server

Startup options and test scripts will be automatically configured based on the roles you have selected. Review and adjust the recommended configuration on the corresponding tabs.

OK Cancel

Linked Jobs

- Uses existing backup jobs to simplify VM selection
- Can select one or many jobs
- If no jobs are selected, only Application Group is tested
- Independent Services

The screenshot shows the 'New SureBackup Job' wizard, specifically the 'Linked Jobs' step. The window title is 'New SureBackup Job'. The 'Linked Jobs' section is active, showing a list of jobs to link. The 'Link jobs' checkbox is checked. The list contains one job: 'Exchange Backup' with a role of '< Not specified >'. The 'Ping' and 'Heartbeat' columns are both 'Yes'. To the right of the table are buttons for 'Add...', 'Edit...', and 'Remove'. Below the table, there is a dropdown menu for 'Process simultaneously up to: 3 VMs'. At the bottom right, there is an 'Advanced' button. At the bottom of the wizard, there are navigation buttons: '< Previous', 'Next >', 'Finish', and 'Cancel'.

Linked Jobs
Select one or more jobs to link to this SureBackup job. All virtual machines from the selected backup jobs will be processed sequentially once the specified application group is initialized.

☒ Link jobs

Name	Role	Ping	Heartbeat
Exchange Backup	< Not specified >	Yes	Yes

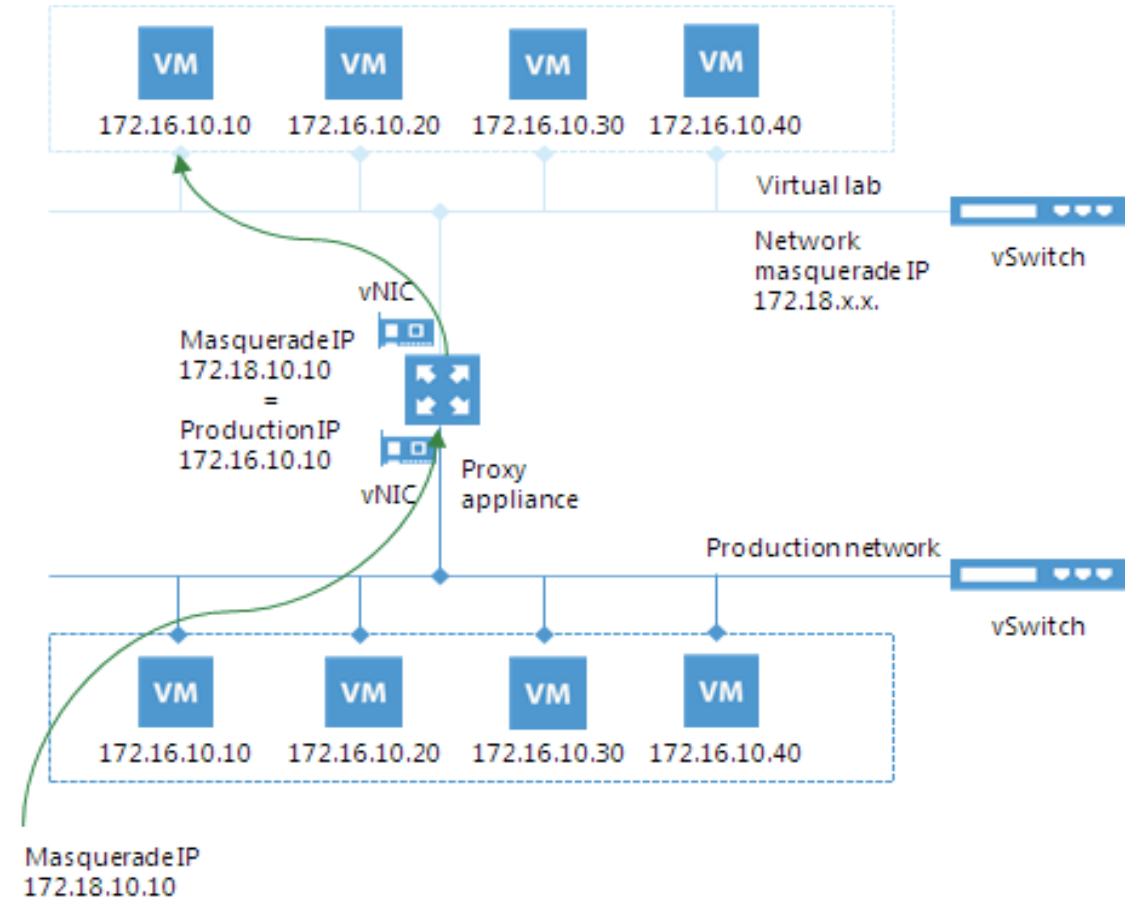

Process simultaneously up to: 3 VMs

Advanced

< Previous Next > Finish Cancel

Virtual Labs

- Defines which Hypervisor will host the VMs
- Specifies which proxy appliance to use
- Creates Isolated Networks for backup VMs
- Prevents duplicate IP conflict on Production network

SureBackup Job

- Configures proxy network
- Starts VMs
- Tests Application group
- Tests Linked Jobs
- Shutdown VMs
- Cleanup Redo files
- CRC Check backup files
- Send Report Email / SNMP

SureBackup: Exchange SureBackup Job

Daily Verification Job

Session Details

Status	Success	Start time	1/12/2017 5:17:39 AM	Details
